

CartFlow QA Suite (Frontend)

Test Summary Report

Manual Testing | Frontend | Version 1.0

Prepared By	Purva Rawale
Project Type	Manual Testing – Frontend
Application Under Test	CartFlow Commerce (https://demo.cartflow.in)
Test Environment	Windows 10 Chrome (latest), Firefox (latest)
Report Version	1.0
Document Date	May 2026
Reference Documents	FRS, Test Plan, Test Scenarios, Test Cases, RTM, Bug Report

1. Project Overview

This document summarises the manual testing I did on the CartFlow e-commerce web application (frontend) as part of my QA portfolio project. CartFlow Commerce is a free open-source platform used by online store owners, and I tested it at the demo site (<https://demo.cartflow.in>) to practice real-world manual testing.

The goal was to check how the main user-facing features behave — registration, login, product search, cart, and checkout — and to document any issues found in a proper, structured way. All testing was done manually, without any automation tools.

Key numbers at a glance:

- 31 test scenarios written covering all major modules
- 516 test cases planned across all modules
- 256 test cases executed in the modules covered by the RTM
- 20 bugs logged with detailed reproduction steps
- All documents created from scratch: FRS, Test Plan, Scenarios, Test Cases, RTM, Bug Report

2. Test Scope

Modules covered (In Scope):

- Register Account
- Login / Logout
- Forgot Password
- Product Search
- Product Display Page
- Product Compare
- Add to Cart
- Wish List
- Shopping Cart
- Checkout
- My Account (Account Info, Change Password, Address Book)
- Order History and Order Information
- Newsletter, Contact Us, Gift Certificate
- Header, Menu, Footer navigation
- Currency switching

Types of testing done:

- Functional Testing — checked whether each feature works as described in the FRS
- Negative Testing — tested with invalid inputs, empty fields, wrong passwords, special characters
- UI Testing — checked placeholders, field labels, error messages, page headings, breadcrumbs

- Smoke Testing — quick sanity check that core flows (register, login, add to cart) work before detailed testing
- Regression Testing — re-ran affected test cases after finding session and login-related bugs
- Cross-browser Testing — tested on Chrome and Firefox (Windows 10)

Not covered (Out of Scope):

- Backend / Database testing
- API testing
- Automation testing
- Admin panel functionality
- Payment gateway (live transactions)

3. Test Execution Summary

The table below shows the module-wise execution results. Some test cases under Forgot Password and Product Compare could not be executed because of issues with the demo environment (email system not working, product compare page navigation broken). These are marked as Blocked.

Module	Total TCs	Passed	Failed	Blocked	Notes / Defect IDs
Register	24	20	4	0	D1, D2, D3, D4
Login	23	15	7	1	D5–D11
Logout	11	10	1	0	D12
Forgot Password	25	9	1	15	D13 (email system blocked)
Search Product	22	17	5	0	D14–D18
Product Compare	24	0	0	24	Blocked – compare page navigation broken
Product Display	37	35	1	1	Minor UI issue
Add to Cart	9	7	1	1	Cart-wishlist sync issue
Home Page	10	10	0	0	-
Checkout	20	20	0	0	-
My Account	9	9	0	0	-
Change Password	13	13	0	0	-
Newsletter	13	13	0	0	-
Contact Us	13	13	0	0	-
Different Currencies	3	3	0	0	-

TOTAL	256	194	20	42	75.8% Pass 7.8% Fail 16.4% Blocked
-------	-----	-----	----	----	--

Pass rate (excluding Blocked): 90.7% — 194 out of 214 executed test cases passed.

4. Defect Summary

Severity breakdown:

- Critical: 3 bugs (BUG_5, BUG_9, BUG_20) — require urgent attention
- Major: 8 bugs — significant functional issues
- Minor: 9 bugs — low impact but should still be fixed

Notable findings worth highlighting:

- BUG_9 (Login): A user can still log in using their old password even after changing it. This is a serious security gap.
- BUG_8 (Login): The password text is visible in the browser page source, which is a basic security problem.
- BUG_20 (Wishlist): Clicking 'Add to Cart' from the wishlist takes the user to the product page instead of adding it to the cart directly.
- BUG_5 (Login): Pressing the browser back button after logging in logs the user out, which breaks basic session management.

Bug ID	Module	Summary	Severity	Priority	Status
BUG_1	Register	Confirmation email not sent after account registration	Major	P1 (Medium)	Open
BUG_2	Register	Privacy Policy field not marked with red * symbol	Minor	P2 (Low)	Open
BUG_3	Register	Password field accepts simple passwords (no complexity check)	Major	P1 (Medium)	Open
BUG_4	Register	Leading/trailing spaces accepted in registration fields	Minor	P1 (Medium)	Open
BUG_5	Login	User gets logged out on clicking browser back button	Critical	P1 (Medium)	Open
BUG_6	Login	User auto-logged in on pressing back after logout	Major	P1 (Medium)	Open
BUG_7	Login	No warning shown after 5+ consecutive failed login attempts	Major	P1 (Medium)	Open
BUG_8	Login	Password text visible in page source (security issue)	Major	P1 (Medium)	Open
BUG_9	Login	Old password still works after password is changed	Critical	P0 (High)	Open

BUG_10	Login	Session not cleared when browser is closed and reopened	Minor	P2 (Low)	Open
BUG_11	Login	No session timeout message after 30 min of inactivity	Minor	P2 (Low)	Open
BUG_12	Logout	Logging out in one browser does not log out in others	Minor	P2 (Low)	Open
BUG_13	Forgot PW	Email address not carried forward from Login to Forgot Password page	Minor	P2 (Low)	Open
BUG_14	Search	Search by product description text not working	Minor	P2 (Low)	Open
BUG_15	Search	Search by product category filter not working	Minor	P2 (Low)	Open
BUG_16	Search	Search in subcategories checkbox not working	Minor	P2 (Low)	Open
BUG_17	Search	Product Compare page navigation not working from search results	Major	P1 (Medium)	Open
BUG_18	Search	Tab key doesn't focus subcategories checkbox	Minor	P2 (Low)	Open
BUG_19	Cart	No warning when negative/zero quantity entered in cart	Minor	P1 (Medium)	Open
BUG_20	Wishlist	Product not added to cart from wishlist	Critical	P0 (High)	Open

5. Test Environment

Parameter	Details
Application URL	https://demo.cartflow.in
Application Type	Web application (Frontend)
Operating System	Windows 10
Browsers Tested	Google Chrome (latest), Mozilla Firefox (latest)
Test Case Tool	Microsoft Excel
Defect Tracking	Excel (Bug Report)
Testing Type	Manual
Test Execution Period	April – May 2026

6. Risks and Observations

Blocked test cases — why they could not be executed:

- Forgot Password module (15 blocked): The demo site's email system was not sending confirmation or reset emails, so the full reset password flow could not be tested. The UI-level steps that could be tested (empty field validation, placeholder checks, back button) were completed.
- Product Compare module (24 blocked): Clicking the 'Product Compare' link from the search results page was not navigating to the compare page correctly. This blocked all compare-related test cases. Logged as BUG_17.

Observations from testing:

- The session management behavior was inconsistent — the app keeps you logged in when you close the browser, but logs you out when you press the back button. These two behaviors contradict each other.
- Password security is weak on the demo site — no complexity rules enforced, password visible in page source, and old passwords still work after a change.
- The search filters (category and subcategory) did not work as expected when specific products were searched with a category selected. This seems like a demo environment limitation but is still documented as a bug.
- Cross-browser behavior was mostly consistent between Chrome and Firefox, except for minor UI layout differences which were not logged as formal bugs.
- The Checkout and My Account modules had 100% pass rate, which suggests those flows are stable on the demo site.

7. Module Coverage at a Glance

Module	Scenarios	TCs Planned	Executed	Bugs Found	Coverage
Register	TS_001	27	24	4	High
Login	TS_002	23	23	7	High
Logout	TS_003	11	11	1	Full
Forgot Password	TS_004	25	25	1	Partial (blocked)
Search	TS_005	22	22	5	High
Product Compare	TS_006	24	24	1	Blocked
Product Display	TS_007	37	37	1	High
Add to Cart	TS_008	9	9	1	Full
Home Page	TS_011	10	10	0	Full
Checkout	TS_012	20	20	0	Full
My Account	TS_013	9	9	0	Full
Change Password	TS_015	13	13	0	Full
Newsletter	TS_026	13	13	0	Full

Contact Us	TS_027	13	13	0	Full
Currencies	TS_031	3	3	0	Full

8. Conclusion and Sign-off

Overall, the testing went well for the scope that could be covered. Out of 256 test cases executed, 194 passed and 20 failed. An additional 42 test cases were blocked due to demo environment limitations (email system and product compare navigation).

The most serious issues found are related to session management and password security — these would be high-priority fixes in any real production application. The checkout, my account, and home page modules were stable with no failures.

This project helped me understand how to write proper test cases, how to trace requirements to test coverage, how to log bugs in a structured format, and how to report testing results clearly. I did this project independently to build my QA skills and portfolio.

Role	Name	Date
QA Tester (Solo)	Purva Rawale	May 2026
QA Lead / Reviewer	<i>Self-reviewed (solo project)</i>	May 2026
Project Manager	<i>Self (solo project)</i>	May 2026
